Stainless steel rod with an auger

SKU: POZMET2S

Gross Price: PLN 774.90

Net Price: PLN 630.00

Technical Specification

Attribute	Value
Dimension	2 m
Color	Grey
Material	Steel
Weight	10 kg
Shipping time	7-14 days

Description

A stainless rod with a drill enables the stability and immobilization of the modular platform. The drill bit attached to the bottom of the water reservoir keeps the pier structure in one place. With the help of anchor rods screwed into the bottom of the water body, the bridge moves in the vertical direction along the pile using a suitable guide or connector.

If the rod up to 2 m in length is too short for a given water depth, an extension can be attached to the anchor rod. Using the post cover available in our store, you can mask the anchor rod.
